Engineer's degree: **Infomation of Technology**
Ho Chi Minh City University of Transport(10/2014 – 5/2019)

Projects

Building e-commerce system (8/2018 – 11/2018):
Description: Building e-commerce system including functions:
    + Login account with each user
    + Payment
    + Edit customer information
    + Manage website interfaces and products
    + Statistical
My position: Developer
Technologies used: HTML5&CSS3, JQuery, PHP, MVC

Online Health Shopping Portal With Product Recommendation (10/2018 – 12/2018):

Description: Project helps the users in curing its disease by giving the list of fruits and herbs that the user should consume in order to get rid of its disease.

+ Project is to help the user to easily search for herbs and fruits that will be good for the health of the user depending on any health issue or disease that he / she is suffering from. This system helps the user to reduce its searching time to a great extent by allowing the user to enter its health problem and search accordingly.

+ The admin can add fruits and herbs to the system and its information.

+ System allows the user to view the selected fruit or the herb's description which effectively how the fruit or the herb will help to improve the user's health.

+ System allows the user to place order which will add the items to the user's cart and make payment for the same.

+ System also includes a module in which the user can search for the hospitals depending on the name of the disease that user enters.

+ System can recommended some product to the user.

My position: Frontend Developer

Technologies used: HTML5&CSS3, JQuery
